CAMPUSFIND – UEAB CAMPUS VIBE

ONE-PAGE BUSINESS MODEL | University of Eastern Africa, Baraton

1. CUSTOMER & PROBLEM

Users: UEAB students, staff, mentors, administrators and university management. They may struggle to recover lost belongings, find mentorship, receive important notices and access campus information because communication and services are fragmented.

2. SOLUTION & VALUE

CampusFind brings three services into one accessible platform: **Lost & Found** (item reports, ownership claims and Smart Match recommendations); **Mentorship** (discover mentors and send requests); and **Notices & Announcements** (share targeted academic and administrative updates with supporting documents). Compared with separate channels and informal processes, it centralizes access, organizes information by audience, and supports role-based permissions.

3. COSTS & FIRST 100 USERS

Running costs: web hosting and domain, internet connectivity, software maintenance, database backups/storage, security improvements, technical support and future upgrades. The source business model does not provide cost figures; obtain hosting quotes and estimate maintenance/support time before setting a budget.

First 100 users (proposed launch plan): recruit a pilot group through class representatives, student leaders and department offices; demonstrate the platform in lectures, orientation and student forums; share the link through official university communication channels; place QR-code posters in high-traffic campus areas; and ask early users to invite classmates. Track registrations and active use across the three modules.

4. RISKS & COMPLIANCE

Privacy: collect only information needed to operate the service; explain why it is collected; obtain appropriate consent where required; limit access by role; and provide a way to correct or request deletion of personal information in line with applicable law and university policy.

Security: use secure login and password storage, HTTPS, access controls, regular updates, backups and audit logs. Restrict sensitive lost-item claim details to authorized reviewers, and avoid publishing personal contact details or identity documents publicly.

Operational risks: false lost-item claims, outdated notices, inappropriate content and low adoption. Use administrator review, report/feedback channels, clear posting rules and regular content checks.

Regulatory fit: the described CampusFind scope is an education/campus information service, not a FinTech product. It does not describe payments, lending or financial accounts, so FinTech-specific regulation is not identified as applicable by the business model. If payment or financial features are added later, assess the relevant requirements before launch.

BUSINESS MODEL SNAPSHOT

Delivery	Web platform for desktop and mobile access
Core resources	PHP application, MySQL database, XAMPP, hosting/domain and support team
Partners	University administration, ICT, departments, student leadership and mentors
Future sustainability	Potential institutional licensing, subscriptions, customization and support contracts; these are proposed, not current revenue

Note: Product features, resources, partners and possible revenue sources are based on the supplied CampusFind Business Model Document. The 100-user rollout and privacy/security controls are proposed implementation steps. No operating-cost amounts were provided in the source document.
