BUSINESS MODEL DOCUMENT

CampusFind - UEAB Campus Vibe

---

1. Executive Summary

CampusFind is a university-based digital platform designed to improve communication, student engagement, and access to campus services.
The platform provides services such as Lost & Found, Mentorship, and Notices & Announcements. It connects students, staff, mentors, and university administrators through one centralized system.
The main goal is to make campus services easier to access, improve information sharing, and strengthen the university community.

2. Problem Statement

University students and staff may experience challenges such as:

Difficulty recovering lost personal belongings.

Limited access to mentorship opportunities.

Missing important university announcements.

Fragmented communication between students and staff.
Difficulty accessing relevant campus information.

CampusFind aims to address these challenges through a centralized digital platform.

3. Proposed Solution

CampusFind provides three main modules:

A. Lost & Found

Report lost and found items.
Browse reported belongings.
Submit ownership claims.
Use Smart Match Assistant recommendations.
Allow administrators to review claims.

B. Mentorship

Connect students with experienced mentors.
Allow students to explore mentorship opportunities.
Support mentorship requests and communication.

C. Notices & Announcements

Publish university announcements.
Share academic and administrative notices.
Upload supporting documents.
Restrict announcements according to school, department, and audience.

4. Target Customers and Users

Customer/User	Needs

Students	Access to campus services and information
Staff	Communication and mentorship participation
Mentors	Opportunities to guide students
Administrators	Manage users, announcements and services
University Management	Improved campus coordination

5. Value Proposition

CampusFind offers:

- Centralized access to important campus services.
- Faster communication and information sharing.
- Improved chances of recovering lost belongings.
- Easier access to mentorship opportunities.
- Organized and targeted university announcements.
- Secure access based on user roles and permissions.

6. Revenue Model

The initial platform is designed primarily as a university service rather than a commercial product.

Possible future revenue sources include:

- University institutional licensing.
- Annual software subscription agreements.
- Customization and implementation services.
- Maintenance and technical support contracts.
- Expansion to other educational institutions.

These are proposed opportunities, not current revenue sources.

7. Key Resources

- PHP application and source code.
- MySQL database.
- XAMPP development environment.
- Web hosting and domain.
- Development and maintenance team.
- University users and administrators.
- Technical documentation.

8. Key Activities

-
- Software development and maintenance.
- Database management.
- User account management.
- Announcement administration.
- Lost-item and claim processing.
- Mentorship coordination.
- Security monitoring and system testing.

9. Key Partners

Potential partners include:

-

University administration.
University ICT department.
Academic departments.
Student leadership.
Mentors and academic advisors.
Web hosting providers.

10. Customer Relationships

CampusFind will maintain user relationships through:

- User accounts and personalized dashboards.
- Role-based access control.
- Notifications and announcements.
- Administrative support.
- Feedback and support channels.

11. Distribution Channels

Users can access CampusFind through:

- The university web portal.
- Desktop computers.
- Smartphones and tablets.
- University computer laboratories.
- Official university communication channels.

12. Cost Structure

Potential operational costs include:

- Web hosting and domain registration.
- Internet connectivity.
- Software maintenance.
- Database backups and storage.
- Security improvements.
- Technical support.
- Future development and upgrades.

13. Competitive Advantage

CampusFind combines several campus services in one platform instead of requiring users to access separate systems.
Its distinguishing features include:

- Integration of Lost & Found, Mentorship and Announcements.
- Smart Match Assistant for ownership claim recommendations.
- School- and department-based announcement access.
- Role-based administration and permissions.
- Centralized campus information management.

14. Sustainability and Future Development

Future improvements may include:

- Email and in-platform notifications.
- Mobile application development.
- Advanced analytics and reporting.
- Improved AI-assisted matching.
- Integration with other university systems.
- Expansion to additional universities.

15. Conclusion

CampusFind seeks to improve the university experience by providing a centralized, accessible and organized digital platform.
Through its integrated modules, the system can support communication, mentorship, lost-property recovery and information sharing within the university community.BUSINESS MODEL DOCUMENT
